

Bicycle Rodeo Skills Events

Event #1: Straight Line / Steering

This skills event requires that the rider maintain a direct course through an eight (8) inch opening between two lines that run parallel for thirty (30) feet. Points will be deducted for each time a tire touches a line, the wheel(s) go off the path, or a foot touches the ground.

Event #2: Maneuvering

This event will have eight cones set in a straight line, 8 feet apart. Students will ride at a comfortable speed while weaving to pass on alternating sides of the cones. Points will be deducted if a student's foot touches the ground, if a cone is touched, or if the student misses going between markers.

Event #3: Balance

This timed event will test the delicate balance of the rider. Students will ride as slowly as possible between parallel lines that are three (3) feet apart and seventy-five (75) feet long. Points will be deducted each time a student's foot touches the ground or a line is hit.

Event #4: Circle or Figure 8

The student will ride through the course one time at a comfortable speed. Each time a wheel goes off the path, a foot touches the ground or a tire touches a line, points will be deducted.
